Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             199799 17354 contig of 3756 bp in length 17365 177564 contig of 2110 bp in length 17365 177564 contig of 2110 bp in length 17564 contig of 2110 bp in length 177404 179097 contig of 1694 bp in length 177404 181636 contig of 2439 bp in length 181737 183644 contig of 1908 bp in length 18175 186351 contig of 1017 bp in length 184862 186351 contig of 1017 bp in length 184862 186351 contig of 1490 bp in length 18765 This is a "working draft' sequence. Runs of N are used to separate the reads and the order in which they appear is completely
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Web site: http://www-seq.wi.mit.edu

arbitrary. Low-pass sequence sampling is useful for identifying clones that may be generated and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1416 14275: gap of 100 bp 14276 15030: contig of 755 bp in length 15031 15130: gap of 100 bp 15131 15554: contig of 724 bp in length 15855 15954: gap of 100 bp 16689 in gap of 100 bp 16789: gap of 100 bp 17529: contig of 741 bp in length 17530 17629: gap of 100 bp 17530 18368 18367: contig of 788 bp in length 18368 18467: gap of 100 bp 18368 19221: contig of 784 bp in length 18467: gap of 100 bp 18368 19221: contig of 784 bp in length

Detecting nucleotide triplet repeats in human chromosome 18q

Claim 21; Fig 15a; 87pp; English.

The present invention describes detecting nucleotide triplet repeats in a region of human chromosome 18q disposed between polymozphic markers D18668 and D185979 to identify a human gene associated with a mood disorder or related disorder. AxX88542 to AxX88705 represents human chromosome 18q TAC clones and primers corresponding to them, used in the exemplification of the present invention. TAC clones comprising a portion of the region of human chromosome 18q between markers D18588 and plassypy are used to identify at least one human gene associated with a mood disorder. is chosen from the Diagnostic and Statistical Manual of Mental disorders, version 4 (DSM-TV) taxonomy. This includes mood disorders (206.xx, 300.44, 311, 301, 13, 297.30, Schizophrenia and related disorders (309.81, 308.3), adjustment disorders (309.XX) and personality disorders (codes 301.XX). Probes derived from genes associated with the mood disorder or related disorder can be used to detect pathological autitations or genetic variations in patients. The methods, probes and antibodies can be used to determine the susceptibility of an individual conditions are used to determine and related disorder or related disorder. The nool disorders and the human gene can be used to treat mood disorders and related and personality of an individual

useful Nucleic acid comprising fragment of chemically modified gene, us for diagnosis and treatment of diseases associated with abnormal cytosine methylation

Claim 1; SEQ ID NO 1457; 32pp + Sequence Listing; German.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer, disease, AlDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulocrative bowel diseases. The present sequence is a gene of the invention.

It was isolated from a human placenta lambda still cDNA library by screening with a probe generated by PCR amplification of placenta cDNA using primers (see also AAT35222-23) hased on the CAP-1 protein. A cDNA clone (AAT35221) for CAP-3 (AAR99254) was also isolated. These cDNA clones can be incorporated into expression vectors and used for prodn. of recombinant CAPs in transformed or transfected host (pref. mammalian) cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Caspase; serpin; inflammation; apoptosis; lung disease; human; CAP; neurodegenerative disease; heart; liver tissue; Alzheimer's disease; parkinson's disease; amyotrophic lateral sclerosis; injury; trauma; hypoxy ischaemia; cytoplasmic antiproteinase-2 protein; CAP-2; nootropic; neuroprotective; vasotropic; tranquilizer; vulnery; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from cligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures -

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level in an unactivated the expression level in an unactivated of CG. where differential expression of Gs is indicative of GGA.

Also included are modulating (M2) GA by contacting of with an agent chart alters the expression of at least one gene in GS; (2) screening (M3) chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting the chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an agent that modulates the expression of gene(s) from GS in the tissue where the exposure of a subject to a pathogen or sterile of inflammation with an agent that modulates the expression of gene(s) from GS in the tissue, where caponse in a subject, exposure of a subject to a pathogen or sterile inflammation fergerially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation injury, ARDS, adult respiratory distress syndrome, creptorile injury, ARDS, adult respiratory distress syndrome, periodontal disease; also bacterial infection, viral infection injury, and the sequence data for the law of the present sequence tepresents agene differentially defined in the present of 
                                                                  Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                335 AGCATCTACAAAGGAGGAATAGTCAAAGCAGCAGCGGCGGCGGCGGCGCGCAGCAGCAGCA 394

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ٠.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó
                                                                                                                                                                                                                                                           The invention provides a method for treating a disease mediated by a caspase in an individual. The method comprises: administering a composition comprising a gene coding for an intracellular mammalian serpin in an amount sufficient to inhibit activity of the caspase upon transient expression of the gene in a target tissue affected by the disease, where the disease or the symptoms are treated. The method can be used for decreasing inflammation, for modulating apoptosis, for treating a lung disease, and for treating a neurodegenerative disease. The inflammation and apoptosis that can be treated are particularly in heart or liver tissue. It can be used for treating Alzheimer's disease, parkinson's disease, amyotrophic lateral sclerosis, and acute injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      such as hypoxy-ischaemia or trauma. The present sequence represents a cDNA encoding the human cytoplasmic antiproteinase-2 protein (CAP-2), an intracellular serpin protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                            This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8867 ASTYRGGNYSTHRTRTRARGYSYSSRSRGYSTHRAAAAASASNTHRASTHRSRYSGASNG 8926

This DNA encodes a stabilising polypeptide and is the FLGA insert of the invention. The invention provides a method for increasing the resistance of a core protein to proteintyle degradation that comprises linking or inserting onto or into the core protein a stabilising polypeptide of formula [(Glya)X(Glyb)X(Glyc)Z]n where Glya, Glyb, Glyc are 1-6 sequential [Glya)X(Glyb)X(Glyc)Z]n where Glya, Glyb, Glyc are 1-6 sequential Gly residues and X, Y, Z are Ala, Ser, Val, Ile, Leu, Met, Phe, Pro or Thr and n can be anything between 1-66 X, Y and Z need not be identical from n repeat to n repeat. Alternatively a nucleic acid encoding the stabilising polypeptide can be linked onto or inserted into a nucleic acid encoding a core protein. The fusion proteins of the invention are more resistant to degradation by proteases and, thus, have a longer half-life than the unfused core protein. The products can be used for treating autolimmune disease, cancer and inflammatton. In particular, the core protein may be an IkappaB regulator protein for the treatment of inflammatory bowel disease, on a nitroreductase protein treatment of inflammatory bowel disease, or a nitroreductase protein core protein pathological conditions. The fusion proteins can also be used in
                                                                                                                                                                                                                                                                   Fusion protein; stabilising polypeptide; proteolytic degradation; resistance; half-life; autoimmune disease; inflammation; nitro drug; IkappaB regulator protein; inflammatory bowel disease; in vivo imaging;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New fusion proteins resistant to proteolytic degradation -
comprising a core protein with a stabilising polypeptide comprising
a peptide sequence containing glycine repeats
                                                                                                                                                                                                                                                                                                                                                                  nitroreductase protein; enzyme therapy; prodrug therapy; protease, cancer; pathological condition; ss.

EBNA 1 protein is used to stably maintain episomes containing EBV origin of replication (oriP) and a gene encoding protein or RNA of interest. Eucaryotic host cells expressing EBNA 1 protein are transfected with these episomes to produce recombinant cell lines expressing multiple genes of interest. This provides a

ö
rapid and reliable method of stably expressing multiple genes in transfected cells. The episomes are useful in the transfection of genes encoding receptors. transporter proteins, ion channels, adhesion molecules and transcription factors. The episomes carrying desired genes can also be used to transfect cells in gene therapy, antisense therapy, for gene amplification, cell immortalisation, etc.
                                                                                                                                                                                                                                                                                                                                              406 AGGTGGGGGCCTCTGCCAGGTACCGGGCGGGGGCAGGCACGGAGGTGCCCAGGTTCCCGCG 465

polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymcleotides are also used in diagnostics as expressed sequence tags of the identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in itssue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

```
polynucleotide (PM) (1) comprising a contiguous span of 8 to 50 nucleotides, where the span includes a G713 or chromosome 13431-q33 related hallelic marker. (1) has neuroleptic activity and can be used as a G713 gene expression inhibitor. (1) can be used genotyping to estimate the frequency of an allele of a G713 or chromosome 13431-q33 related biallelic marker in a population, and of a haplotype for a set of biallelic markers in a population. (1) is also useful in detecting an association between a haplotype and a trait. The frequency is used for detecting an association between a genotype and a trait being schizophrenia. The genotype is used to determine whether an individual is at risk of developing schizophrenia. (1) can also be used as a medicament against several disorders preferably brait, psychiatric clisorders such as schizophrenia and bipolar disorder. Early identification of risk of developing schizophrenia and bipolar disorder. Early identification of risk of developing schizophrenia (1) and also be used as a medicament as and/or prophylactic treatment. AAA55967 encodes the numan G713 protein AAY90962; AAA55968 encodes the murine G713 protein and AAA5603 represent human G713 protein and AAA5603 represent promarkers A12 to A43; AAA55961, and AAA56031 represent PCR primers used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             406 AGGIGGGGGCCICIGCCAGGIACCGGGGGGGGGGAGGCACGAGGIGCCCAGGIICCCGCG 465

AAQ95180 is a simple tandem repeat (STR) corresponding to wgla9. The STR can be used for treatment and diagnosis in himan and veteribary medicine, partic. for genetic obaracterisation, mapping, linkage studies and analysis/diagnosis of acquired disease alleles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; gene; gene expression product; diagnosis; therapy; probe;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Б
                                                                                                                                                                                                                                                                        The present invention describes an isolated, purified or recombinant polynucleotide (PN) (I) comprising a contiguous span of 8 to 50 nucleotides, where the span includes a G713 or chromosome 13431-q33 crelated biallelic marker. (I) has neuroleptic activity and can be used as a G713 gene expression inhibitor. (I) can be used genotyping to estimate the frequency of an allele of a G713 or chromosome 13431-q33 crelated biallelic marker in a population. (I) is also useful in detecting an association between a haplotype and a trait. The frequency is used for detecting an association between a genotype and a trait being shizophrenia. The genotype is used to detecting an association between a genotype and a trait being schizophrenia. The genotype is used to determine whether an individual is at risk of developing schizophrenia. (I) can also be used as a medicament against several disorders preferably brain, psychiatric disorders such as schizophrenia and bipolar disorder. Early indentification of risk of developing schizophrenia is possible, which confidentification of risk of developing schizophrenia is possible, which the multing confidential pary9062; AAA55968 encodes the murine G713 protein AAY9062; AAA55967 encodes the human G713 protein AAY9065; AAA55967 encodes the human G713 protein AAX9065; AAA55967 encodes the human G713 protein AAX90651, and AAA56031 and AAA56032 represent PCR primers used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó

Claim 1; Page 2147; 2479pp; English.

XX

XX

Camerhoo of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising derecting at least one differentially expressed gene product in a test sample from a cell cancerous state of a mammalian cell, comprising derecting at least one differentially expressed gene product in a test sample from a cell compressed of being cancerous, where the gene product is encoded by one of the 524B polyuucleotide sequences given in AAZ12532 to AAZ1779. The collyuucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of Polyuncholisms. Polypeptides encoded by the polyuncleotides for experimental, diagnostic and charapeutic purposes. The polyuncleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polyuncleotides of the invention are especially used in the dentify and analogues and management of colorectal cancer, breast cancer, and lung cancer. The polyuncleotides can also be used to screen for companied and antagonists.

Sequence 1, Application US/08846784
Patent No. 5747645
GENERAL INFORMATION:
APPLICANT: Sprecher, Cindy A.
TITLE OF INVENTION: CYTOPLASMIC ANTIPROTEINASE-2 AND
TITLE OF INVENTION: CYTOPLASMIC ANTIPROTEINASE-3 AND CODING SEQUENCES
NUMBER OF SEQUENCES: 16
CORRESTONDENCE ADDRESS:

Patent No. 5840491
GENERAL INFORMATION:
APPLICANT: Kakizuka, Akira
APPLICANT: Kakizuka, Akira
TITLE OF INVENTION: DNA Sequence Encoding the Machado-Joseph
Patent No. 5840491
TITLE OF INVENTION: Disease Gene and Uses Thereof
WUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hamilton, Brook, Smith & Reynolds, P.C.
